JANUARY 1 POTATO STOCKS UP 1 PERCENT

An estimated 176.4 million cwt. of potatoes for all uses were in storage in the fall producing areas on January 1, 1978. This was 1 percent above a year earlier and 11 percent more than 1976.

The regional breakdown is as follows: The eight Eastern States had 29.1 million cwt. in storage, up 7 percent from a year earlier. Maine's stocks of 20.8 million cwt. compare with 17.9 million cwt. in 1977. New York and Pennsylvania are recording stocks below last year's level. Stocks in the eight Central States totaled 37.3 million cwt., 28 percent above last year. North Dakota, Minnesota and Wisconsin are showing greater stocks than last year. The eight Western States had 110.0 million cwt. in storage, down 7 percent from 1977 due to significant reductions in Washington and Oregon. Stocks in Idaho were recorded at 60.5 million cwt., unchanged from last year.

Disappearance of the 1977 fall crop to January 1, 1978 was 122.8 million cwt. (excluding Nevada), a decrease of 4 percent from last year.

The quantity of potatoes processed to January 1, 1978 in the seven major States is 47.2 million cwt., 7 percent less than last year.

Note: Stocks are defined as the quantity remaining in storage for all purposes and uses, including shrinkage and waste and other losses that occur after the date of each report. Sales of fall potatoes for all purposes generally account for about 90 percent of the total fall production. Shrinkage and loss and home use account for the remaining 10 percent.

3/ USERS ARE CAUTIONED THAT THE STOCKS ESTIMATE FOR NORTH DAKOTA MAY BE LESS RELIABLE THAN FOR THE OTHER STATES DUE TO THE LARGE NUMBER OF NORTH DAKOTA STORAGE OPERATORS WHO REFUSED TO REPORT STOCKS ON THE JANUARY 1978 INQUIRY.

POTATO STOCKS QUALITY SURVEY

The potato stocks quality information contained in this report is based on a survey conducted by the Crop Reporting Service in the Red River Valley of North Dakota and Minnesota. A total of 129 samples selected on a random basis were placed in storages at the time of harvest. Subsequent reports will be issued each month during the 1977-78 storage season showing the cumulative average grade and weight loss for the potatoes removed from storage at the time of shipment.

At the request of the Red River Valley Potato Growers Association, samples were selected this year for processing potatoes only. Since few Red type potatoes are used for processing, there will be no data published for Red type potatoes this year.

This report does not include Russet information as an insufficient number of samples had been recovered by January 1, 1978. Final data for the 1976-77 storage season are provided, showing the average grade at harvest and after storage for all samples that were recovered from storages.
